Background
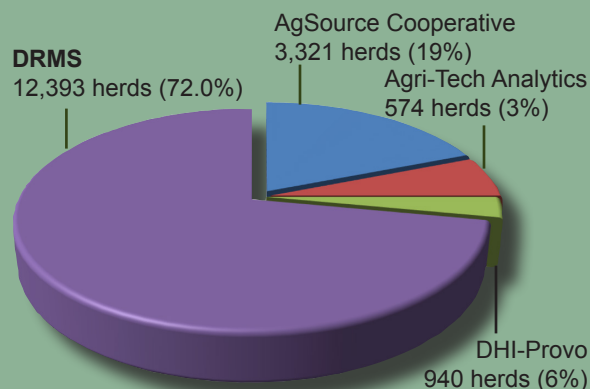

Dairy Records Management Systems provides dairy information products for DHIAs, dairy producers, veterinarians, consultants and other dairy industry professionals throughout the United States and abroad. Our certified status every year from Quality Certification Services confirms the quality and accuracy of our data in the industry.

Market Share

In 2015, DRMS processed data each month on over 12,000 DHI herds (72%) with more than 2.1 million cows (49%), making it the largest volume dairy records processing center in the United States. A higher processing volume means greater expertise and more economical costs for producers. It also ensures staff are available to quickly respond to programming needs for reports, software and new technology.

DHI Herds by DRPC

AgSource Cooperative
3,321 herds (19%)

DRMS
12,393 herds (72.0%)

Agri-Tech Analytics
574 herds (3%)

DHI-Provo
940 herds (6%)
