

Herd Progress Report (DHI-217)

Is My Herd Improving?

- Have my production levels changed over the last 24 tests?
- Am I making progress with getting cows bred on time?
- Has my turnover rate increased in the last 2 years?

Comparisons are very helpful when setting goals and monitoring the progress of your management parameters. The Herd Progress Report provides a quick way to track your herd's progress over the last 24 tests in key areas:

- **Production** - milking cow average for days in milk, 1-40 day milk, and rolling herd average
- **Milk Components and SCC** - milk lbs., fat lbs, fat %, protein/solids %, and SCC
- **Reproduction** - % bred at 100 days in milk, % successful breedings, % pregnant, pregnancy rate and service sire \$
- **Somatic Cell Counts** - % 1st lactation cows , % older cows with SCC Score of 4 or less, SCC score for total herd
- **General Management** - % of cows in milk, number of fresh cows, projected minimum calving interval, days dry, turnover rate, and death rate

Each area is listed with your figures for the last 24 tests. In addition to providing you with critical management information, this report can be helpful for dairy or financial consultants working with your herd.
